There are two settings for the position of the gallery within your live eBay listings, this is either the top of the bottom of your current description.

Before the gallery is applied to your live eBay listings you can select either 'Top' or 'Bottom' from the position drop down in the settings section of the app.

It is not possible to change the position of galleries that have already been applied to you eBay listings, the setting within the app will only change for future galleries you apply to listings.
