I get eBay error 12018 when trying to apply a design

When you apply design via the application Froo! Template Themes you are actually amending your live eBay listing, and with all revisions eBay will check the content of the revision to ensure it does not breach its listing policy.

This particualr eBay error has been generated because when your item was listed is was listed with item specifics that do not match the category it was listed to. This general happens when an item is listed via eBay product catalog, eBay provides suggested item specifics but infact these do not match the product or catagory.

To resolve this issue, alter the item specifics within your listing to correctly reflect the product you are selling, eBay will block any amendment to your listing until you have update the item specifics for this listing.
